

## Creating a slideshow in Kid-pix

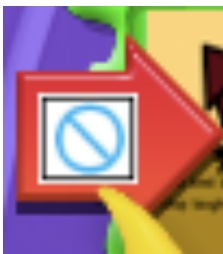

After you have made your slides click on the slide show panel

Once on the slides page, load your pictures using the folder icon

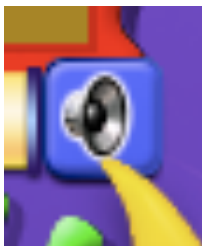

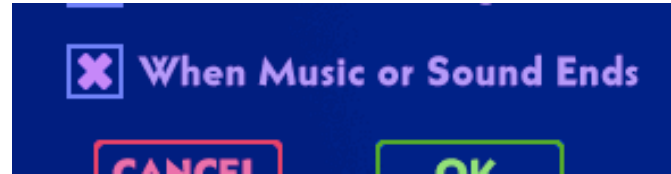

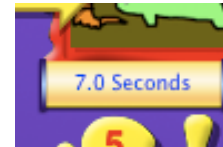

Delete any blank slides and change the background colour

Click on the slide show effects icon

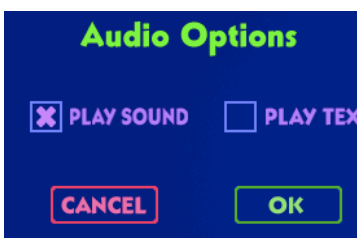

Click on the red arrow to change the transition effect

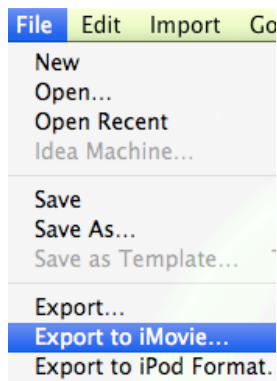

Click on this button to set the timing or choose when music or sound

Then click on the audio options and choose what you need. If you click play text that would be the computer voice and may not show up in your final slide show.

Click the green arrow to view your slide show.

Save your slideshow.

The best thing would be to export to iMovie or iPod format as kid-pix says that slides are missing if they are not all saved in one folder or moved from laptop to laptop.

Once you are happy with your work export to iMovie or iPod format.
